	Phase 1 - Receive		Phase 2 - Info Gathering					Phase 3 - Writing	Phase 4 - Vetting					Phase 6 - Sending / Follow up	
Key Steps	**SLs** receive email from ministry (or multiple ministries) (e.g. CPS) *and/or* *some ministries might go straight to YH or DMs*	**SLs** will email/forward **Student Development Team** with the report request – usually the **YH or AYH / DM**	**YH** check in School Cockpit if child has prior/existing counselling cases	If child is not known to school (i.e. whether anyone knows about this situation), **YH** interviews child	If child is known to school: **YH** gather information from School Cockpit	**YH** gather qual information from **Form Teacher** on student observations	**YH** gather information from **School Counsellor** (about intervention plans, safety plans, frequency of sessions, and any observations relevant to the case)	**YH** write report(s)	Send to **Principal** for vetting Some Ps find it important to add their inputs at this stage to ensure that the case gets the right level of attentiveness	**P** adds in confidential information only they have access to (e.g. counselling details visible only at their level) (optional)	**P** will sign and say ok (optional)	**YH** work on feedback/ comments from **P** (optional)	**P** sends back to **YH / AYH**	**YH/DM** will convert to PDF then send to ministry	**School** retains a copy *This is important for potential legal disputes (which can span 2–3 years), reintegration efforts, or future requests from agencies for historical context.*
Pain Points	• No tracking system for these different reports. • Need to convert each report into PDF/Word – need to be password protected. • Educators have no clue what forms comes next → "It's really just what comes into our inbox"	• In cases where the student development team is lean or the YH is new, this step may require extra coordination to identify who knows the student (tacit knowledge).	• Counselling records are restricted — visible only to school leaders (principal level) and counsellors. The YH can see that a case exists but not the details, creating an extra handoff.	• Discreetness needed as sometimes a child doesn't know why they're being called out (esp primary school kids). • No structured template — the YH wishes for a checkbox-style format instead of free-text narrative for observations.	• Same data requested by every agency but in different formats (termly vs annual, percentage vs raw) – YHs need to go into SC multiple times to pull out multiple info. • YHs must manually copy data from each screen into the report • SC sometimes may not have the most updated info. Housing type not updated • Some data (e.g. parent occupation) is access-restricted and not visible even to VPs	On the whole, oreviously collected info on a student (e.g. PTM remarks on CCA, leadership) doesn't match what agencies ask for (social-emotional, behavioural triggers). This leads to: • Discreetness and tactfulness needed when speaking to FTs for more info • **Time consuming** – need to wait for teacher availability. • Time consuming – need to check info with CCA teachers and/or subject teachers as FTs may not have all the info	• Information is behind access rights. • Need to find time to meet with school counsellor. • School counsellor may not have the most updated information.	• Oftentimes there are more than one (3–4 reports) that a teacher must fill up for ONE child. • Some reports are time sensitive, only 3–5 days turnaround. • Each agency has its own template with different fields, formats, and page lengths (e.g. CPS school report vs Singapore Children's Society 7-page form vs NUH referral). • The first ~5 pages of most reports are system data the YH copies manually; copy-paste doesn't always work as formats differ. **This is the single biggest pain point.**	• Sometimes this must be printed out for vetting due to sensitivity of information.	–	–	–	–	–	–	• Reports are password protected, and it's a hassle to dig through old emails for the password • No centralised digital archive system; some schools have hard copies accumulate over the years.
Opportunities	Suggestions: • Can we create a multi-respondent form? • Can ministries upload their forms onto a central space within TW that Ps can just pull from? • Create identifier; who the report is for.	–	–	Suggestion from YH: checkbox-style format instead of free-text narrative for observations.	–	–	Pull in info from case sync for a 'first cut' of qualitative remarks from School Counsellor.	Auto-generation of static information already in system.	–	–	–	–	–	–	Digital archive system for archived reports.
